GreenGen Hires Enell Dely, Expands European Solutions Team

BETHESDA, MD – Nov. 2, 2020 – Green Generation ([GreenGen](#)), a global provider of energy efficiency solutions, announced today the new hire of Enell Dely as an energy engineer based in France to help support its expansion of offerings and services throughout Europe. Enell will be responsible for advising on energy and mechanical matters for project implementation teams, including building system performance assessments, analyzing utility data and developing energy efficiency retrofit solutions.

“We’re pleased to up-level our team’s ability to support our international work by hiring talent located directly within markets,” said Brad Dockser, chief executive officer of GreenGen. “We’re confident that by hiring the best talent globally, we’ll continue to deliver innovative results for our clients as the industry evolves.”

Enell has an international background in energy, utility and technology. Prior to joining GreenGen, Enell was an energy manager and energy efficiency engineer at Citron, where he carried various energy audits of buildings and vehicle fleet, installed SCADA systems, and supervised the building stock energy consumption of several major French and international companies.

“I look forward to incorporating my skillset into GreenGen’s team as we work across borders to achieve sustainability goals,” said Dely. “I am very excited to join an organization that is so committed to driving a double bottom-line for its clients, day in and day out.”

Previous to Citron, Enell worked as an assistant solar coordinator for Total, where he managed diverse assignments for solar PV hybrid projects in Africa. He speaks five different languages, including French, English, Spanish, Mandarin and Creole, and he earned a master’s degree in renewable energy and energy efficiency from ESIEE Paris.

This hire follows the recent addition of Davide Guarini, an energy engineer based in Italy, to the GreenGen team.

About Green Generation

Green Generation (GreenGen) transforms the world's built environment through its visionary turnkey approach to innovation and solutions by integrating energy, real estate, technology, and capital markets to Operate in the Green. From offices in Washington DC, London, Tokyo, and Shanghai, GreenGen helps its clients use energy as a driver of value and sustainability across all asset types around the world.
